

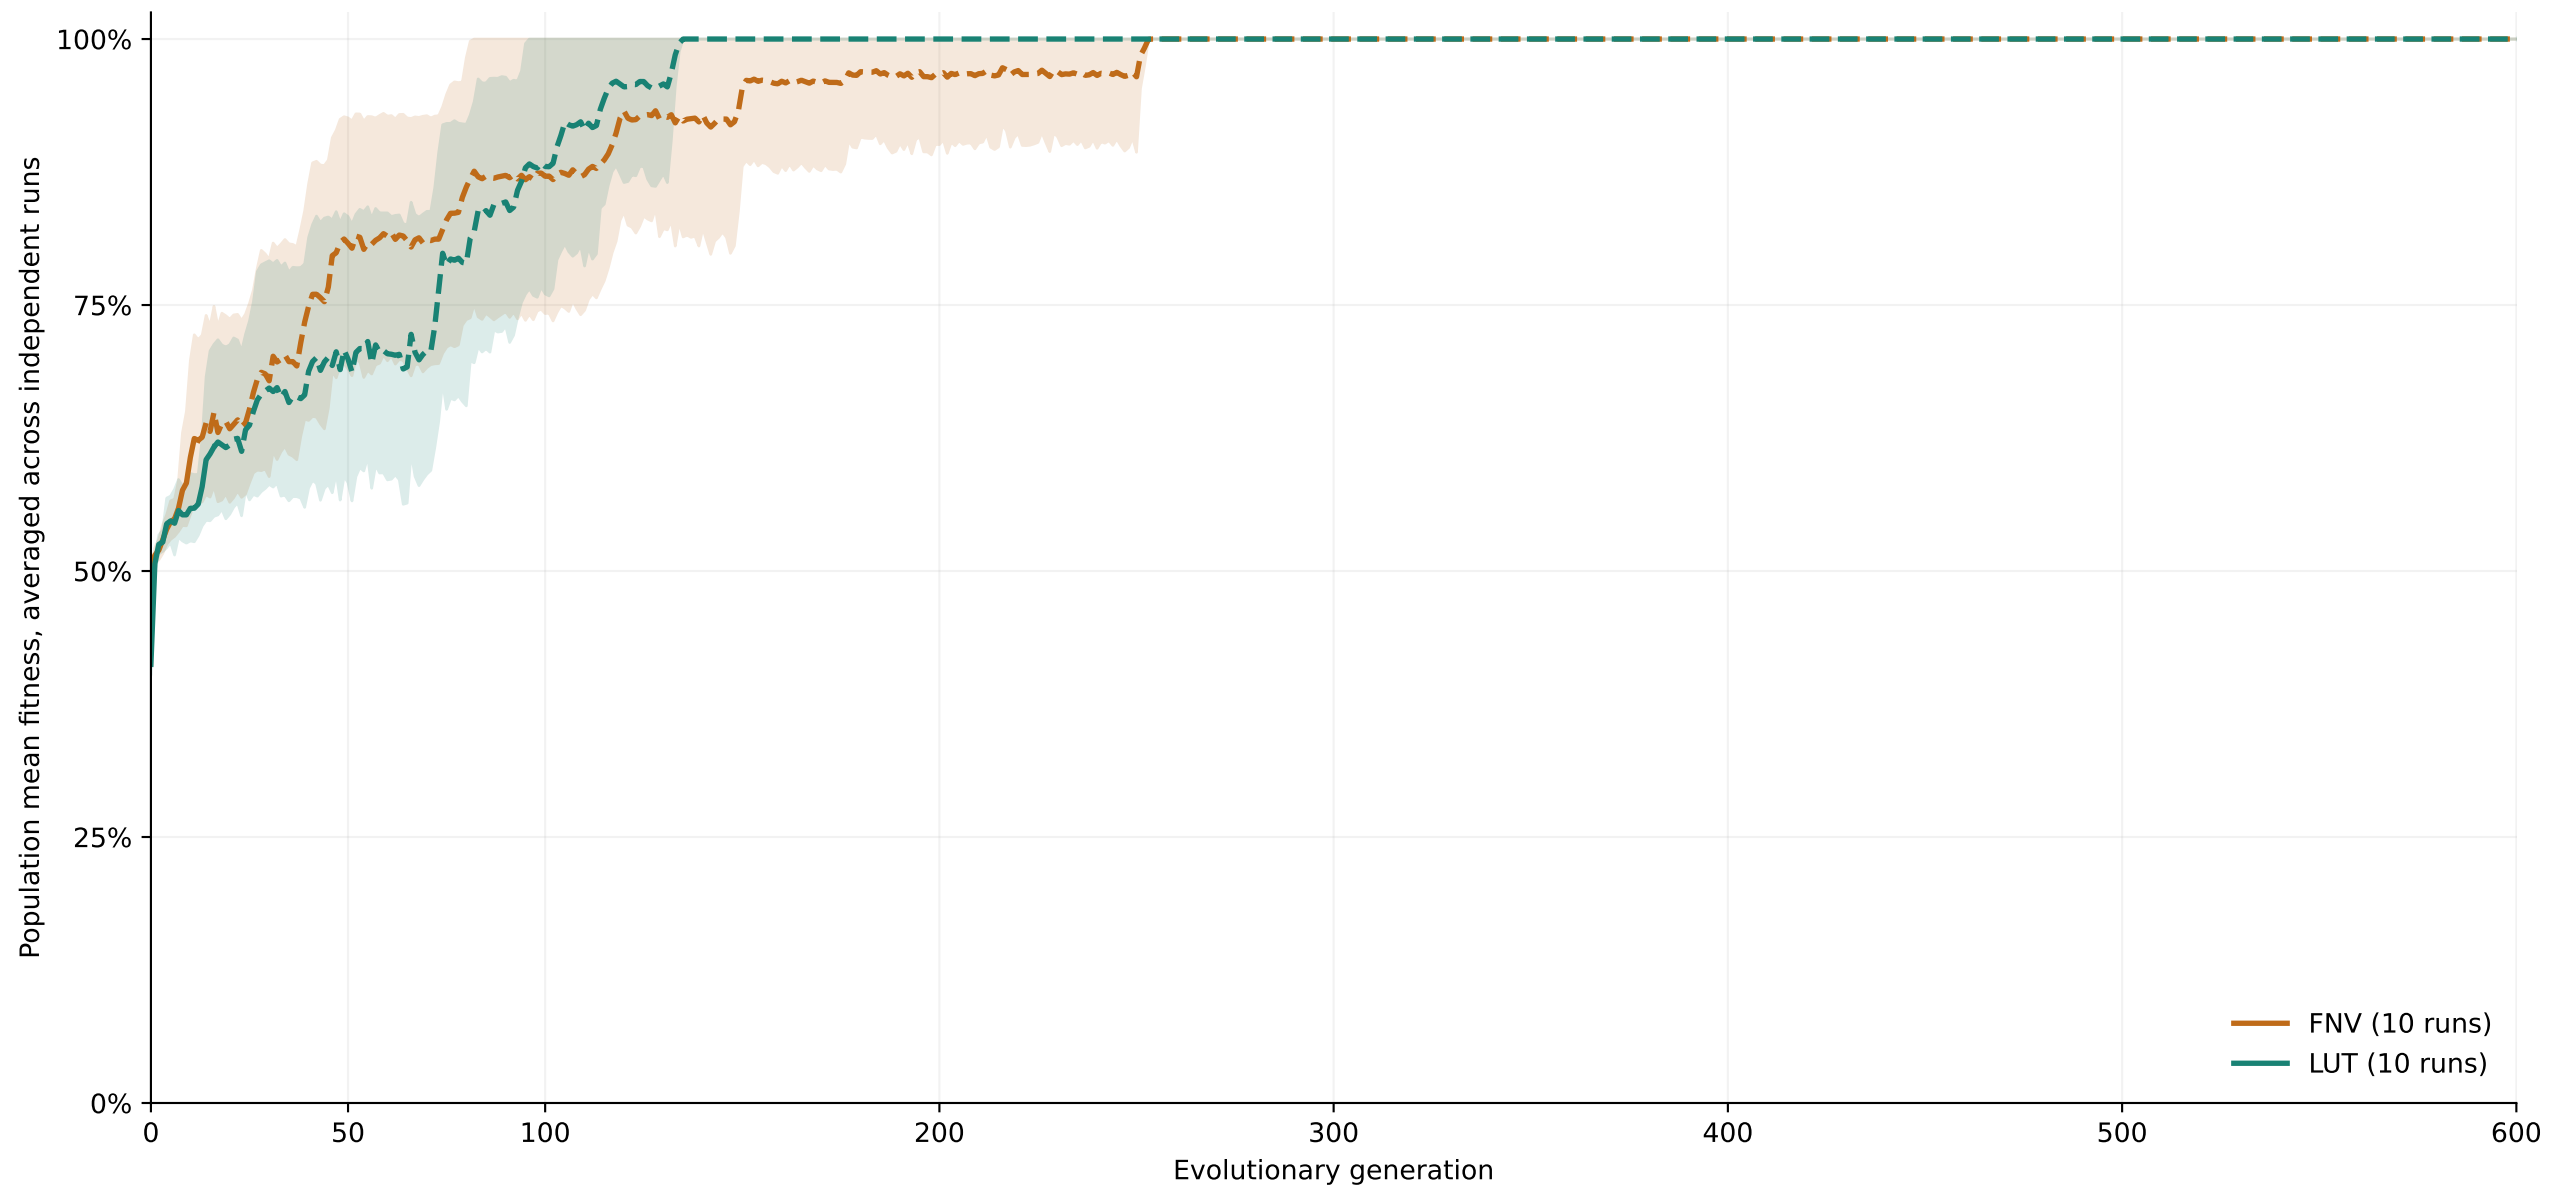

Fig. 31. Half adder: developmental evolution through generation 600.

Population 60 · 10 planned seeds per substrate · one attempt · 10-minute soft / 15-minute hard run cap

Mean and pointwise 95% bootstrap intervals. Dashed portions include assumed population-perfect tails.

Incomplete cohorts stop at their shortest history; failed runs are retained.

FNV: 10/10 runs, through g600 | LUT: 10/10 runs, through g600
